

# Lane's Integration Partners

Lane works with various integration technology partners to enhance faxing solutions in the healthcare industry. Our partnerships provide cost savings, increased communication, better support and stability.

By working with Lane and our partners, you can have world-class technology while using multiple solutions. Read more to learn about our partnerships and how they work with Lane to improve customer communication.

Clinisys

Lane has been an authorized partner with Clinisys (previously Sunquest) for decades. Clinisys has been providing diagnostic informatic solutions to laboratories and healthcare organizations. They develop, design and support a comprehensive and secure clinical information suite for over 1200 hospitals. PowerPath and Lane faxing provide an Enterprise platform that successfully transmits laboratory results to and from doctors offices, hospitals and clinics.

Atlas by  
Clinisys

Clinisys Atlas is a laboratory outreach solution that achieves productivity and profitability in outreach programs. Its system contains extensive integrative capabilities that allow for secure connections between practitioners and laboratory health systems. Lane partners with Atlas to provide a fax communications solution that reaches all corners of laboratory outreach programs.

EPIC

EPIC is one of the most well-known enterprise messaging solutions in the healthcare industry. Lane's flagship product Passport integrates with EPIC's print services interface API. Through EPIC Connection Hub, companies can easily select their faxing vendor of choice using the downloadable links. The integration is easy, cost effective, secure and reliable.

Orchard  
Software

Orchard, a leading provider of laboratory information systems, offers various solutions and services to improve laboratory efficiency, enhance integrations, and expand testing capabilities. By partnering with Orchard to integrate our Passport technology with Orchard, Lane executes seamless healthcare data transmission for laboratory professionals.

Hyland  
OnBase

Hyland OnBase uses an automation-centric approach to document and data management across various business and organizational environments. Lane's fax solutions work in tandem with Hyland OnBase to ensure improved information and content management. We use File API and SFTP - one for inbound and one for outbound to send information back and forth.

Xifin

Xifin is a health information technology company that leverages diagnostic information to improve the quality and economics of healthcare. Lane's integration allows for systems to fax billing statements connected through Lane's Passport faxing solution and Xifin's billing platform. This works through file API & SFTP.

Seacoast  
Laboratory  
Data Systems

Seacoast Laboratory Data Systems offers customizable software solutions for commercial and hospital outreach laboratories. Lane partners with Seacoast for their custom application development, enhancement, and ability to interface with our fax solutions for a seamless laboratory communication experience across platforms. Technology utilized includes: WebAPI.
